GreenKeeper®

212

Series

Control

System

Get superior quality without getting soaked. The controller, or timer, is the “brain” of your automatic sprinkler system, running it on and off automatically. It conveniently controls what day, what time and how long to water. With its many features, the Toro GreenKeeper 212 is an exceptional value. And its smart modular design expands to easily incorporate new landscape additions into your existing watering plan.

TORO. Count on it.

Homeowners have trusted the Toro name for more than 85 years. Toro products mow our lawns, trim our hedges and clear our walks. Count on Toro sprinkler components for quality assurance, season after season.

Professional products require professional installation.

The performance of an automatic sprinkler system is only as good as the professional who installs it. A quality contractor ensures long-lasting, efficient operation of your system. Choose a licensed professional with an established reputation and solid references. All materials and workmanship should be covered by a warranty.

GreenKeeper 212 Controller/Timer

2 to 12 zones

The controller is the "brain" of your automatic sprinkler system.

The controller turns sprinklers and valves on and off automatically, signaling what day, what time and how long to water.

You'll never outgrow the GreenKeeper 212.

GreenKeeper 212 is a smart buy because it never becomes outdated. If you add to your landscape at a later date, the GreenKeeper 212 expands simply by adding another 2-zone module—without costly and complicated alterations.

Why waste water when nature is doing its job?

Just plug in the optional Rain Switch and keep your sprinklers from running in the rain. This reliable and inexpensive option saves countless gallons of water. (*Rain Switch sold separately.*)

Features

- Two zones expandable to 12 with two-zone plug-in modules (base model offered with four zones)
- Remote capability (optional)
- Three independent programs
- Seven-day calendar or interval watering cycle
- 365-day calendar with odd- or even-day scheduling
- Programmable rain delay from one to seven days
- Season Adjust setting from 10–200% in 10% increments for convenient water savings
- Split-cycle feature to prevent runoff when Season Adjust is over 100%
- Large, clear display that's simple to program
- Vandal-resistant, lockable outdoor model available
